PG-1

YO-ELEVEN is card game based on craps. It uses 6 or more decks (12 recommended) Ace-6 only Ace's always counts as 1. All odds and payouts are based on 12 decks.

It is recommended that at least 1/3 of the cards are placed behind the cut card.

There are 3 bets a Pass bet which must be played to play the game . The minimum pass bet may be any amount the house desires within WSGC rules .

The other two bets are the YO-11 and Hard ways. They are both 1\$ minimum by rule .

Rules and dealing procedures

Game play, each player places a Pass bet and if they desire a YO-11 and or a Hard Way bet. Players may not play both the YO-11 and hard ways bets , per WSGC rules.

The house then deals two cards to each player from the dealers left to right ,one card each . Then a second card left to right. After dealing each player two cards the house takes two cards .

Starting from the dealers right bets are paid & taken. All bets for any player are resolved before moving onto the next player.

Hard Ways or YO-11 bets are always the first bets paid or taken .

Starting at third base the dealer will pay or take the Hard Ways or YO-11 Hard Ways are based solely on the players cards.

Hard Ways pay table

Hard way bets win on 2-2 (hard 4) 3-3(hard 6)

4-4(hard 8) and 5-5 (hard 10)

Winning hard way bets pay 3-1 if the 2 cards are not suited.

Suited hard ways pay 7-1

Hard ways loose on any 7 or any combination of 4-6-8 or 10 that is not a hard way. See examples below

3-Ace easy 4 loser

2-4, 5-Ace easy 6 loser

5-3 6-2 easy 8 loser

6-4 easy 10 loser

A two card total of 2-3-5-9-11-or 12 will push on the hard ways.

The YO-11 bet has 2 chances to win .

If the player has a YO-11 bet and their two card total is 11 they win 8-1 if the two cards are unsuited and 11-1 if the players cards are suited . If the house has an 11 and the player has a 4-5-6-7-8-9-10 the player wins 8-1 if the house and the player have an 11 the player wins only the 8-1 off their hand. The YO-11 bet always wins or loses there are no pushes on this bet. If the player has a 2-3-or12 and the house has an 11 the player loses.

Next pass bets are paid or taken Pass bets for any players who's two card total is 2-3, or 12 (instant loss) are taken . Pass bets totaling 11(instant win) are paid even money . Pass bets totaling 7 are pushed . Any other number and they will play against the dealer . If the two card total is 4-5-6-8-9 or 10 the player is now playing against the house.

If the house total is 7 all Pass bets on the table lose, except pass bets where the player has a total of 7 , automatic push. or 2-3-12. Automatic loser

If the total is 4-5-6-8-9, or 10 they will pay all players with the same total as the house by the following pay table.

4 or 10 pays 2-1

5 or 9 pays 3-2 (like a blackjack)

6 or 8 wins even money .

After completing the above for all players the cards are placed in the discard rack and the next hand is dealt.

The aggregate limit on payouts is up to the house If they wish to put one in the game . Provided it meets a \$2000 minimum on \$100 or less maximum bet tables . A \$4000 minimum aggregate must be met if the betting limit is Higher than \$100. Additionally your aggregate limits must comply with WSGC rule 230.40.810

Players may not side bet on other players hands or bet on the dealers hand. Winning the YO-11 when the dealer has an 11 is not considered betting on the dealers hand. Any irregularities , I.E. misdealt hands are to be handled by the house policy which must meet WSGC rules.

Hard ways 7.2% house edge

The pass bet has a 6.34% house edge

The YO-11 bet has a 3.74% house edge

Please note that if you allow players to bet more than 25\$ on the YO-11 bet there is an issue with card counting. It is rare that a shoe will get to the point where it can be done but it does happen. If you limit the YO-11 bet to 25\$ and cut 50% of the deck off this issue is eliminated. While the deck may still turn to the players favor counting will only be an issue if someone stands behind the table and counts the shoe jumping in for 1 hand no mid shoe entry will eliminate that problem, otherwise known as “wonging”. Use of less than 12 decks can also cause the game to be countable.

There is also a second pay table for this game, specifically the YO-11 bet that pay table is as follows. With this pay table only 1/3 of the deck needs to be cut off to protect the house from card counting.

Pay Table 2 for YO-ELEVEN bet.

Player non Suited 118-1

Player suited 1111-1

House 11 with player 4-10 ...7-1

This pay table has a house edge of 8.4% for the YO-11 bet
